

Turning Idle Assets into Living Security

Make Your Money Work as Hard as You Did

You've worked a lifetime to build a strong financial foundation — saving diligently and setting aside funds for stability. But if a portion of your money is sitting in cash, CDs, or other low-yield accounts, it may not be doing much to protect your future. With asset-based long-term care, you can turn those idle assets into meaningful protection that grows in value when you need it most.

Ways You Can Use Asset-Based Long-Term Care

- **Multiply the Value of Your Savings** – Some long-term care plans may provide benefits that are several times your contribution, depending on the product
- **Keep Access to Your Money** – Maintain control with built-in liquidity and refund options if care is never needed.
- **Provide for Your Family** – Leave a tax-free death benefit to loved ones if your benefits go unused.
- **Enhance Your Financial Efficiency** – Transform stagnant assets into a solution that may help protect your health, your independence, and your legacy.

Why It Matters

Many retirees keep large portions of their savings in "safe" accounts — but safety shouldn't mean stagnation. Asset-based long-term care allows you to preserve security while adding purpose and protection. Your money doesn't just sit; it works harder for you by creating living security that helps support your care needs, protects your family, and gives you confidence in the years ahead.

It's not about spending more, it's about making what you already have work smarter. By turning idle assets into living security, you can help safeguard your independence and create lasting value for yourself and those you love.
